

NAVIN JAGANATHAN

Senior Linux Engineer With AWS

navin.jagan@yahoo.com | 7358188243

Chennai, India 600091

LinkedIn: <https://www.linkedin.com/in/navin-j-61460185/>

PROFESSIONAL SUMMARY

Dynamic IT professional with over 19 plus years of extensive experience in Linux/Unix administration, application production support, and IT infrastructure management, complemented by a strong background in AWS Cloud and project management. Proven track record of delivering exceptional support to top-tier financial and banking clients, including JP Morgan Chase, the Colorado Governor's Office, and CNN, while ensuring optimal performance and reliability of server environments. Expertise in formulating effective talent acquisition strategies and implementing ITIL-based processes, along with a commitment to fostering collaborative relationships with stakeholders to drive successful project execution. A results-oriented approach consistently enhances operational efficiency and client satisfaction.

CORE COMPETENCIES

- IT Infrastructure Management
- AWS Cloud Services (EC2, S3, RDS, IAM, CloudWatch, VPC, Route53, ELB)
- Project & Program Management / Global IT Operations
- Backup & Recovery Solutions (VERITAS NetBackup)
- Incident, Change & Problem Management
- Linux/Unix Systems Administration
- Team Leadership & People Management
- System Performance Optimization
- Process Automation & Efficiency Enhancement

WORK HISTORY

Senior Linux Engineer | Fluence-A Siemens & AES Company - Bengaluru, India

10/2023 - 08/2025

- Executing software deployment, configuration, updates, patches, and other lifecycle activities to ensure optimal system performance.
- Collaborating with development and technical support teams to resolve issues and enhance processes.
- Strengthening security and system integrity through OS hardening on Linux systems.
- Ensuring maintenance, configuration, and backup management of AWS Cloud infrastructure to ensure peak performance.
- Directing a team of 30 members, designing integrations with leading solutions to monitor diverse services, including network and software applications.
- Engaging with stakeholders, and proactively resolving critical issues and impacts, to ensure seamless operations.

- Creating and refining Excel reports and PowerPoint presentations to communicate insights and updates effectively.
- Sourcing, interviewing, and selecting top talent to build a high-performing team.
- Fostering and strengthening team collaboration to drive efficiency and innovation.
- Configuring and testing hosts in Nessus security scans to detect vulnerabilities, and coordinating fixes for critical and high-risk issues.
- Setting up and managing Synology storage solutions, while scheduling regular backup jobs in Array and DAS servers for data security.
- Deploying and configuring Nispera to analyze and optimize performance, streamline operations, and maximize revenue.
- Upgrading and installing Ubuntu OS from version 18 to 22.04 to enhance system stability and security.
- Utilizing and monitoring Zabbix to identify and preemptively address issues like disk space constraints, and SSL certificate expirations.
- Managing and resolving tickets while creating new changes, incidents, and tasks through the SNOW ticketing tool.
- Supervising documentation and architecture for key processes using Microsoft Visio, while leading efforts in change, problem, and incident management.
- Launching and configuring DAS (SCADA) systems for each project, ensuring seamless implementation.
- Driving strategic implementation of JIRA for project management and issue tracking, while fostering collaboration through Confluence for seamless knowledge documentation and sharing.
- Partnering with team members to drive the successful attainment of KPI-driven goals and objectives.
- Performing OS and configuration backups, and restoring them promptly when needed.
- Creating and renewing SSL certificates on Linux/LDAP boxes to ensure secure communications.
- Managing the Go-Live process and decommissioning of servers to ensure smooth transitions, and system stability.
- Facilitating the end-to-end administration, configuration, and optimization of Linux/Unix systems, and AWS cloud environments.
- Designing and implementing robust backup and recovery strategies to safeguard critical business data.
- Collaborating with global stakeholders and vendors to ensure SLA compliance, and smooth program execution.
- Facilitating training and mentorship programs to build high-performing technical teams.
- Key Result Areas:
- Maintained high availability of critical services by deploying load balancers and clustering solutions in a Linux infrastructure.
- Increased security levels by conducting vulnerability assessments and implementing necessary patches on Linux servers.
- Enhanced server performance by optimizing Linux systems and implementing efficient configuration management.
- Mentored junior engineers in best practices related to Linux administration, fostering a culture of continuous learning within the team.

Lead Administrator | Wipro Technologies - Chennai

05/2022 - 07/2023

- Generated and managed various tickets through ServiceNow while leading a team of 11 members.
- Provided support for several AWS cloud servers, ensuring optimal performance and reliability.

- Identified gaps in Unix/Red Hat Linux monitoring, and proactively addressed and documented them.
- Resolved and troubleshoot issues while collaborating with the NetBackup team to ensure smooth operations.
- Contributed to migrations using tools like Platespin, P2P, and V2V, ensuring seamless transitions.
- Created, coordinated, and tracked Red Hat cases, ensuring timely resolution and follow-ups.
- Managed the addition of file systems with new LUNs on Linux, and worked closely with the SAN team for LUN allocation.
- Worked with Veritas Cluster environments, including patching VCS servers, and troubleshooting issues.
- Applied patches through the Starfleet playbook, as well as manually, across PROD, COB, DEV, and UAT environments.
- Contributed to info-scale upgrades, enhancing system capabilities and stability.
- Managed and troubleshoot tickets, as well as created new change requests, incidents, and tasks via the SNOW ticketing tool.
- Utilized tools like AXIOM, CyberArk, JIRA, BMC TrueSight, and Chop reports for system management and monitoring.
- Managed AWS Cloud technologies such as EC2, S3, CloudWatch, and Load Balancer creation for improved cloud infrastructure.
- Diligently created and maintained DNS records on Amazon Route 53 for efficient network management.
- Gained hands-on experience with iDRAC (Dell) and iLO (HP) management interfaces for efficient server administration.
- Generated and renewed SSL certificates on Linux/LDAP boxes, managing Apache and Tomcat application servers.
- Leveraged networking protocols and performance monitoring tools like Netstat, Vmstat, Iostat, and Top for troubleshooting and performance tuning.
- Accomplished multiple tasks within established timeframes.

Tower Lead/ Senior Consultant | Infosys - Chennai

06/2021 - 03/2022

- Directed the management and optimization of over 2,000 Unix/Linux servers, leading a team of 30+ engineers to enhance system performance and drive operational excellence.
- Spearheaded the end-to-end technical transition for GLOBAL FOUNDRIES, supervising the seamless transfer of services and infrastructure, with minimal disruption to operations.
- Facilitated cross-functional Technical Knowledge Transfer (TKT) sessions across global locations, including the USA, Germany, and Singapore, ensuring the efficient transfer of expertise.
- Delivered both Secondary and Primary support, ensuring a flawless Go-Live transition, and maintaining uninterrupted service continuity across systems.
- Administered and triaged tickets across diverse Unix/Linux flavors (RHEL, Solaris, AIX, CentOS, HP-UX), achieving rapid issue resolution, and ensuring system stability.
- Managed AWS Cloud services, including EC2, S3, CloudWatch, and Load Balancer configurations, optimizing cloud infrastructure for scalability and operational efficiency.
- Effectively managed Reverse Knowledge Transfer (ReverseKT) and on-the-job training phases, upskilling the team, and ensuring readiness for complex project execution.
- Administered task, incident, problem, and change management processes using ServiceNow, driving process efficiencies, and ensuring timely issue resolution and stakeholder satisfaction.

- Monitored system health and conducted server administration using OP5, effectively managing day-to-day system issues, hardware failures, and file system alerts to sustain uptime.

Lead Infrastructure Engineer | Vector Systems Inc. - Aberdeen, NJ *06/2014 - 10/2020*

- Directed a team of 15 professionals, ensuring seamless ticket management and resolution through ServiceNow for streamlined IT operations and effective issue tracking.
- Engineered and configured DHCP and DNS services, optimizing network performance by strategically allocating subnets through Infoblox for efficient IP address management.
- Deployed and configured Linux OS via RedHat Satellite Server, ensuring comprehensive system documentation and smooth integration across various environments for consistent operations.
- Upgraded and patched RHEL servers from versions 5.x to 5.11 and 6.x to 6.5, ensuring system security and stability through effective patch management.
- Coordinated with SAN teams to allocate new LUNs and decommission outdated Linux servers, enhancing storage optimization and streamlining data management processes.
- Led the patching process of Wall-Street applications through the PRO-IV interface, using login_tos to guarantee integrity and compliance within the system.
- Orchestrated WSS-process operations, including server recovery, shutdown, and startup procedures, while escalating issues to vendors for rapid resolution and minimizing downtime.
- Collaborated with the ION team to facilitate secure turnover processes, ensuring smooth patch deployment and system transition with minimal operational disruption.
- Modified and optimized databases by editing GDPPARAMETERS keys and utilizing the login_tos function, ensuring peak database performance and accuracy.
- Authored and updated technical documentation, contributing to process management improvements and maintaining a comprehensive knowledge base on the internal bank Wiki.
- Monitored system health using Splunk, identifying and addressing performance gaps, while managing LDAP and Tomcat application servers for consistent, high-quality service delivery.
- Managed incidents and changes through CA Ticketing Management, ensuring efficient creation, resolution, and closure of service tickets, thus maintaining operational effectiveness.
- Engineered EC2, S3, and Elastic IP instances through AWS, enhancing cloud infrastructure capabilities for scalability, flexibility, and cost optimization.
- Designed and managed VPCs and subnets, facilitating secure zone-to-zone communications and bolstering network security by implementing ACL-based IP blocking.
- Supervised critical data processing tasks through Automic, while designing automated server build management processes with Puppet, leading to enhanced operational efficiency.
- Configured and optimized CDN on Amazon CloudFront, driving improvements in website performance and reducing latency by fine-tuning content delivery mechanisms.
- Renewed and managed SSL certificates on Linux/LDAP servers, ensuring secure server communication while maintaining Apache and Tomcat servers and installing monitoring agents such as Splunk and Rapid7.
- Employed networking protocols (netstat, vmstat, iostat, and top) to monitor system performance, promptly identifying and resolving issues to ensure optimal network efficiency.

- Created and maintained DNS records using Amazon Route 53, optimizing domain name resolution and ensuring seamless network configuration across cloud environments.
- Addressed and documented Unix/RedHat Linux monitoring gaps, ensuring consistent quarterly patching using RedHat Satellite Server to maintain robust system health.
- Configured new LUNs and established volume groups (LVM) on Linux servers, collaborating with SAN teams for optimized storage allocation and seamless server performance.
- Installed and managed EMC Power Path configurations, ensuring efficient path management and decommissioning of legacy Linux servers to optimize system performance.
- Engaged in business unit projects, gathering requirements, deploying RedHat Linux on VMware vSphere, and configuring NFS sharing and mounted file systems for both Linux and AIX environments.
- Created and managed file systems and monitored memory and YUM updates on RHEL VMs, ensuring system efficiency and reliability through effective configuration management.
- Client: CNN and Colorado Governor's Office
- Key Result Areas:

Senior Linux/Unix Administrator | Vypak Cranford - Cranford, NJ 06/2013 - 03/2014

- Client: JP Morgan Chase

Unix Computer Programmer | Concepts Software Inc. - Atlanta, GA

- Client: Credit Suisse

11/2010 - 02/2013

Unix Technology Analyst | RR Donnelley - Chennai

11/2009 - 10/2010

Information Systems Engineer | Eclipsys/Allscripts - Parsippany, NJ

10/2007 - 12/2008

IT Executive | Schawk (www.schawk.com) - Chennai

07/2004 - 01/2007

System Engineer | Solar Vision Technologies - Chennai

10/2003 - 07/2004

EDUCATION

Annamalai University - Chennai, India

06/2006

MBA: Computer And Information Systems

Madras Christian College (MCC) - Chennai, India

01/2001

Bachelor of Arts: Statistics And Commerce

NOTABLE ACCOMPLISHMENTS ACROSS THE CAREER

- Managed & supported 20,000+ servers, both physical & virtual, across different environments such as PROD, COB, UAT, and DEV.
- Addressed and resolved Audit compliance issues for BIGFIX and BFI agents to ensure regulatory adherence.
- Diagnosed system inefficiencies and bottlenecks, proposing and executing targeted solutions to enhance overall system performance.
- Supported and optimized over 200 AWS cloud instances across Ubuntu, RedHat, and Windows environments, ensuring smooth, uninterrupted operations.
- Administered & utilized Nagios / Sumo Logics / Splunk / Zabbix / and CloudWatch to monitor critical healthcare systems, focusing on performance, security, and disk space management.

- Optimized patch management through implementation of automation, resolving patching gaps and boosting system performance.
- Architected and managed VPCs and subnets to ensure secure inter-zone communication, while blocking suspicious IPs/subnets using ACLs.
- Created and maintained DNS records on InfoBlox, ensuring seamless and accurate domain name resolution.
- Provisioned and administered Linux servers on Amazon, including EC2, EBS, ELB, Security Groups, and IAM, while managing Amazon RDS databases and monitoring server performance via Amazon CloudWatch and SNS.
- Showcased SAN management expertise by adding LUNs and SAN copy processes, integrating new EMC disks on OEL RAC clusters, and clearing dead paths from power paths.
- Delivered superior support for the Wall Street application on the FX project, troubleshooting app/OS-related issues across SAND, DEMO, and Data migration environments.

CERTIFICATIONS

AWS Certified Solutions Architect-Associate

AWS Certification Quiz Show Solutions Architect Associate Exam in 2020

Sun Solaris 10 Certified System Administrator in 2010

Sun Solaris 9 Part One Certified in 2008

Cisco Certified (CCNA 2005)

Microsoft Certified Professional (Windows 2003 Server-MCP) in 2004

2-Year PNC (Professional Numeric Centered Curriculum) Awarded by NIIT, Chennai in 2000
